The study of crime and its reporting is unique in its exploration of the ethical dilemmas that arise in the practice of journalism. The nature of crime, its societal impact, and the means by which it is investigated and reported pose significant challenges for journalists. In "Crime Reporting" by Margaret Duffy, the author delves into these complexities, offering insights into the ethical dimensions of crime coverage.

Duffy’s work is structured to examine the multifaceted aspects of crime reporting, beginning with an exploration of the nature of crime itself. She considers the role of media in shaping public perceptions of criminal behavior, highlighting the importance of accuracy and nuance in reporting. The book then moves on to discuss the challenges faced by journalists in covering crime, including the ethical implications of sensationalism versus responsible reporting.

Throughout the text, Duffy engages with key theoretical frameworks and empirical studies to analyze the ethical issues at play in crime reporting. She discusses the role of sensationalism in media reporting, the impact of digital platforms on the consumption of crime news, and the ethical considerations involved in the coverage of specific crimes, such as those involving children.

One of the central arguments of "Crime Reporting" is the need for journalists to foster greater awareness of the complexities of crime and its reporting. Duffy advocates for a more balanced approach that avoids oversimplification, ensuring that readers are provided with a nuanced understanding of the issues. The book also offers practical guidance for journalists, including strategies for conducting research, managing sources, and developing ethical frameworks for decision-making.

"Crime Reporting" concludes with an examination of the role of journalism in promoting public safety and accountability. Duffy argues that by fostering a deeper understanding of crime and its reporting, journalists can play a vital role in shaping public policy and creating a more informed and engaged citizenry.

Overall, "Crime Reporting" is a comprehensive resource for journalists, students, and anyone interested in the ethical dimensions of crime reporting. It provides a valuable perspective on the complexities of crime reporting and the ethical challenges that journalists face in navigating this terrain. By promoting a more nuanced and responsible approach to crime news, the book contributes to the ongoing dialogue about how we report crime and its impact on society.
Designing Experiments for the Social Sciences: How to Plan, Create, and Execute Research Using Experiments is a practical, applied text for courses in experimental design. The text assumes that students have just a basic knowledge of the scientific method, and no statistics background is required. With its focus on how to effectively design experiments, rather than how to analyze them, the book concentrates on the stages where researchers are making decisions about procedural aspects of the experiment before interventions and treatments are given. Renita Coleman walks readers step-by-step on how to plan and execute experiments from the beginning by discussing choosing and collecting a sample, creating the stimuli and questionnaire, doing a manipulation check or pre-test, analyzing the data, and understanding and interpreting the results. Guidelines for deciding which elements are best used in the creation of a particular kind of experiment are also given. This title offers: - pedagogy, ethical considerations, and examples pertinent to all social science disciplines.

Doing News Framing Analysis - Paul DiGiammarino - 2010-07-29

Doing News Framing Analysis provides an interpretive guide to news frames - what they are, how they can be observed in news texts, and how framing effects are measured and evaluated in social science, group, and individual level studies. Together, the collection covers the full range of topics in which framing has been developed and applied - across topics, sources, methodologies, and effects. It will help framing researchers at all levels to better understand news framing and outcomes.
